‡ These authors contributed equally to this work.

**Simple Summary:** A Simple summary goes here.

**Abstract:** A single paragraph of about 200 words maximum. For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: 1) Background: Place the question addressed in a broad context and highlight the purpose of the study; 2) Methods: Describe briefly the main methods or treatments applied; 3) Results: Summarize the article's main findings; and 4) Conclusion: Indicate the main conclusions or interpretations. The abstract should be an objective representation of the article, it must not contain results which are not presented and substantiated in the main text and should not exaggerate the main conclusions.

**Keywords:** keyword 1; keyword 2; keyword 3 (list three to ten pertinent keywords specific to the article, yet reasonably common within the subject discipline.).

## 1. Version

This Rmd-skeleton uses the mdpi Latex template published 2024-03-21. However, the official template gets more frequently updated than the `rticles` package. Therefore, please make sure prior to paper submission, that you're using the most recent `.cls`, `.tex` and `.bst` files (available [here](#)).

## 2. Article Header Information

The YAML header includes information needed mainly for formatting the front and back matter of the article. Required elements include:

journal: notspecified  
type: article  
status: submit
```

Journal options are in Table 2. The status variable should generally not be changed by authors. The type variable describes the type of of submission and defaults to article but can be replaced with any of the ones in Table 1

2.1. Journal Specific YAML variables

```
# for journal Diversity,  
# add the Life Science Identifier using:  
lsid: http://zoobank.org/urn:lsid:zoobank.org:act:nmnn  
  
# for journal Applied Sciences  
# add featured application  
featuredapplication: |  
  Authors are encouraged to provide a concise  
  description of the specific application or  
  a potential application of the work. This  
  section is not mandatory.  
  
# for the journal Data  
# add dataset doi and license  
dataset: https://doi.org/10.1000/182  
datasetlicense: CC-BY-4.0  
  
# for the journal Toxins  
# add key contributions  
keycontributions: |  
  The breakthroughs or highlights of the manuscript.  
  Authors can write one or two sentences to describe  
  the most important part of the paper.  
  
# for the journal Encyclopedia  
encyclopedia: |
```

For entry manuscripts only: please provide a brief overview of the entry title instead of an abstract.  
entrylink: [The Link to this entry published on the encyclopedia platform.](#)

*# for the journal Advances in Respiratory Medicine*

*# add highlights*

addhighlights: |

This is an obligatory section in “Advances in Respiratory Medicine”, whose goal is to increase the discoverability and readability of the article via search engines and other scholars. Highlights should not be a copy of the abstract, but a simple text allowing the reader to quickly and simplified find out what the article is about and what can be cited from it. Each of these parts should be devoted up to 2~bullet points.

**Table 2.** MDPI journal names.

### 3. Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be reviewed carefully and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research. Citing a journal paper [1,2]. And now citing a book reference Gujer [3]. Some MDPI journals use Chicago and others use APA, this template should choose the correct citation format for you once you specify the journal in the YAML header.

To use endnotes, change `endnotes: true` in the YAML header, then use `\endnote{This is an endnote.}`.

### 4. Materials and Methods

Materials and Methods should be described with sufficient details to allow others to replicate and build on published results. Please note that publication of your manuscript implicates that you must make all materials, data, computer code, and protocols associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

Research manuscripts reporting large datasets that are deposited in a publicly available database should specify where the data have been deposited and provide the relevant accession numbers. If the accession numbers have not yet been obtained at the time of submission, please state that they will be provided during review. They must be provided prior to publication.

Interventionary studies involving animals or humans, and other studies require ethical approval must list the authority that provided approval and the corresponding ethical approval code.

### 5. Results

This section may be divided by subheadings. It should provide a concise and precise description of the experimental results, their interpretation as well as the experimental conclusions that can be drawn.

#### 5.1. Subsection Heading Here

Subsection text here.

##### 5.1.1. Subsubsection Heading Here

Bulleted lists look like this:

- First bullet
- Second bullet
- Third bullet

Numbered lists can be added as follows:

1. First item
2. Second item
3. Third item

The text continues here.

**Figure 1.** A figure added with a code chunk.

5.2. *Figures, Tables and Schemes*

All figures and tables should be cited in the main text as Figure 1, 3, etc. To get cross-reference to figure generated by R chunks include the `\\label{}` tag in the `fig.cap` attribute of the R chunk: `fig.cap = "Fancy Caption\\label{fig:plot}"`.

When making tables using `kable`, it is suggested to use the `format="latex"` and `tbl.envir="table"` arguments to ensure table numbering and compatibility with the `mdpi` document class.

**Table 3.** This is a table caption. Tables should be placed in the main text near to the first time they are cited.

|                   | mpg  | cyl | disp |
|-------------------|------|-----|------|
| Mazda RX4         | 21.0 | 6   | 160  |
| Mazda RX4 Wag     | 21.0 | 6   | 160  |
| Datsun 710        | 22.8 | 4   | 108  |
| Hornet 4 Drive    | 21.4 | 6   | 258  |
| Hornet Sportabout | 18.7 | 8   | 360  |

For a very wide table, landscape layouts are allowed.

**Table 4.** This is a very wide table

| Title.1 | Title.2 | Title.3 | Title.4                                                    |

| Entry 1 | Data    | Data    | This cell has some longer content that runs over two lines |
| Entry 2 | Data    | Data    |                                                            |

### 5.3. Formatting of Mathematical Components

This is an example of an equation:

$$a = 1.$$

If you want numbered equations use Latex and wrap in the equation environment:

$$a = 1, \tag{1}$$

the text following an equation need not be a new paragraph. Please punctuate equations as regular text.

This is the example 2 of equation:

$$a = b + c + d + e + f + g + h + i + j + k + l + m + n + o + p + q + r + s + t + u + v + w + x + y + z \tag{2}$$

Theorem-type environments (including propositions, lemmas, corollaries etc.) can be formatted as follows:

Example of a theorem:

**Theorem 1.** *Example text of a theorem*

The text continues here. Proofs must be formatted as follows:

Example of a proof:

**Proof of Theorem1.** Text of the proof. Note that the phrase “of Theorem 1” is optional if it is clear which theorem is being referred to.

□

The text continues here.

## 6. Discussion

Authors should discuss the results and how they can be interpreted in perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

## 7. Conclusion

This section is not mandatory, but can be added to the manuscript if the discussion is unusually long or complex.

## 8. Patents

This section is not mandatory, but may be added if there are patents resulting from the work reported in this manuscript.

**Supplementary Materials:** The following supporting information can be downloaded at: <https://www.mdpi.com/article/10.3390/1010000/s1>, Figure S1: title; Table S1: title; Video S1: title.

**Author Contributions:** For research articles with several authors, a short paragraph specifying their individual contributions must be provided. The following statements should be used “X.X. and Y.Y. conceive and designed the experiments; X.X. performed the experiments; X.X. and Y.Y. analyzed the data; W.W. contributed reagents/materials/analysis tools; Y.Y. wrote the paper.” Authorship must be limited to those who have contributed substantially to the work reported.

**Funding:** Please add: This research received no external funding'' or This research was funded by NAME OF FUNDER grant number XXX.'' and and “The APC was funded by XXX”. Check carefully that the details given are accurate and use the standard spelling of funding agency names at <https://search.crossref.org/funding>, any errors may affect your future funding.

**Institutional Review Board Statement:** In this section, you should add the Institutional Review Board Statement and approval number, if relevant to your study. You might choose to exclude this statement if the study did not require ethical approval. Please note that the Editorial Office might ask you for further information. Please add “The study was conducted in accordance with the Declaration of Helsinki, and approved by the Institutional Review Board (or Ethics Committee) of NAME OF INSTITUTE (protocol code XXX and date of approval).” for studies involving humans. OR “The animal study protocol was approved by the Institutional Review Board (or Ethics Committee) of NAME OF INSTITUTE (protocol code XXX and date of approval).” for studies involving animals. OR “Ethical review and approval were waived for this study due to REASON (please provide a detailed justification).” OR “Not applicable” for studies not involving humans or animals.

**Informed Consent Statement:** Any research article describing a study involving humans should contain this statement. Please add Informed consent was obtained from all subjects involved in the study. ‘ ‘ OR Patient consent was waived due to REASON (please provide a detailed justification). ‘ ‘ OR “Not applicable” for studies not involving humans. You might also choose to exclude this statement if the study did not involve humans.

Written informed consent for publication must be obtained from participating patients who can be identified (including by the patients themselves). Please state “Written informed consent has been obtained from the patient(s) to publish this paper” if applicable.

**Data Availability Statement:** We encourage all authors of articles published in MDPI journals to share their research data. In this section, please provide details regarding where data supporting reported results can be found, including links to publicly archived datasets analyzed or generated during the study. Where no new data were created, or where data is unavailable due to privacy or ethical re-strictions, a statement is still required. Suggested Data Availability Statements are available in section “MDPI Research Data Policies” at <https://www.mdpi.com/ethics>.

**Acknowledgments:** All sources of funding of the study should be disclosed. Please clearly indicate grants that you have received in support of your research work. Clearly state if you received funds for covering the costs to publish in open access.

**Conflicts of Interest:** Declare conflicts of interest or state ‘The authors declare no conflict of interest.’ Authors must identify and declare any personal circumstances or interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funding sponsors in the design of the study; in the collection, analyses or interpretation of data in the writing of the manuscript, or in the decision to publish the results must be declared in this section. If there is no role, please state ‘The founding sponsors had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, an in the decision to publish the results’.

## Abbreviations

The following abbreviations are used in this manuscript:

|      |                                                |
|------|------------------------------------------------|
| MDPI | Multidisciplinary Digital Publishing Institute |
| DOAJ | Directory of open access journals              |
| TLA  | Three letter acronym                           |
| LD   | linear dichroism                               |

## Appendix A

### Appendix A.1

The appendix is an optional section that can contain details and data supplemental to the main text—for example, explanations of experimental details that would disrupt the flow of the main text but nonetheless remain crucial to understanding and reproducing the research shown; figures of replicates for experiments of which representative data are shown in the main text can be added here if brief, or as Supplementary Data. Mathematical proofs of results not central to the paper can be added as an appendix.

**Table A1.** This is a table caption.

| Title 1 | Title 2 | Title 3 |
|---------|---------|---------|
| Entry 1 | Data    | Data    |
| Entry 2 | Data    | Data    |

**Appendix B**

All appendix sections must be cited in the main text. In the appendices, Figures, Tables, etc. should be labeled, starting with “A”—e.g., Figure A1, Figure A2, etc.
